

PHY100S - The Magic of Physics - Class 13

"For us believing physicists, the distinction between past, present, and future is illusion, however persistent."

-- Einstein (1955)

§ 11.1 - Relativity of Space

not following text

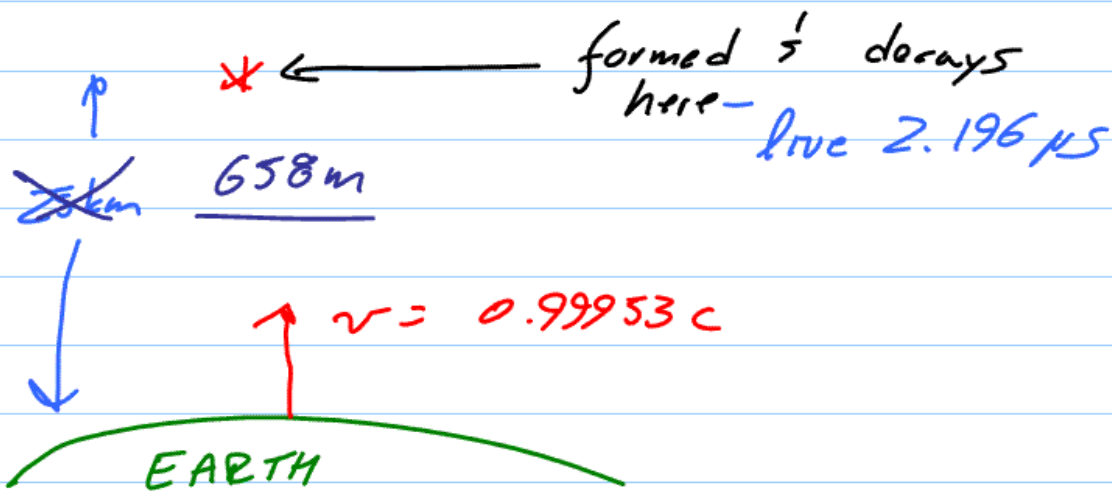

If no time dilation!

ρ will travel a distance
^{"mv"} = speed \times time

$$= 0.999653 c \times 2.196 \mu\text{s}$$

$$\underline{\underline{658\text{m}}}$$

In frame where μ stationary

Lengths are contracted along their direction of motion

Prediction! not tested

c same number \Rightarrow
 time dilation \Rightarrow
 length contraction \Rightarrow

Simultaneity not in text

2 events! flashes of light

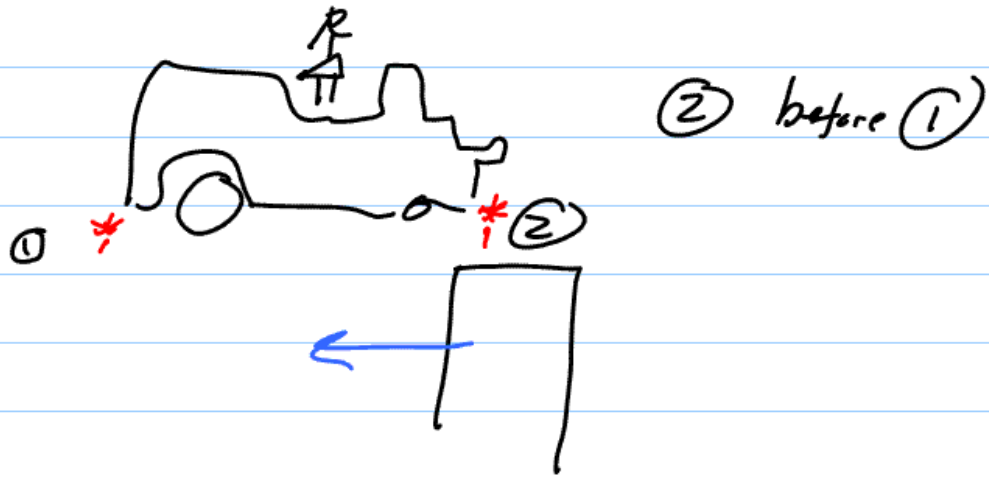

Simultaneous! Mort sees flashes at same time

Mort! width of platform = length of train

Velma riding on and in middle
of train

George GAMOW! MR. TOMPKINS
IN PAPERBACK (Cambridge)

$$c = 50 \text{ km/hr}$$

MT. RAINIER EDITED FIRST
FOR MORT
